# Računarska tehnika i računarske komunikacije **Osnovi računarskih mreža 2**

## Vežba 6 – Dodatak

|                 |                 |                 | OSI Model   |                              |
|-----------------|-----------------|-----------------|---|------------------------------|
|                 | Layer           | Data unit       | Function <sup>[3]</sup>   | Examples                     |
|                 | 7. Application  |                 | High-level APIs, including resource sharing, remote file access, directory services and virtual terminals                                       | HTTP, FTP, SMTP              |
| Host            | 6. Presentation | Data            | Translation of data between a networking service and an application; including character encoding, data compression and encryption/decryption   | ASCII, EBCDIC, JPEG          |
| layers          | 5. Session      |                 | Managing communication sessions, i.e. continuous exchange of information in the form of multiple back-and-forth transmissions between two nodes | RPC, PAP                     |
|                 | 4. Transport    | Segments        | Reliable transmission of data segments between points on a network, including segmentation, acknowledgement and multiplexing                    | TCP, UDP                     |
|                 | 3. Network      | Packet/Datagram | Structuring and managing a multi-node network, including addressing, routing and traffic control  | IPv4, IPv6, IPsec, AppleTalk |
| Media<br>layers | 2. Data link    | Bit/Frame       | Reliable transmission of data frames between two nodes connected by a physical layer  | PPP, IEEE 802.2, L2TP        |
|                 | 1. Physical     | Bit             | Transmission and reception of raw bit streams over a physical medium  | DSL, USB                     |
